DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: words appear to be omitted in the phrase "to thereby offset gain characteristics each other". Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Chung et al. (US Pat. App. Pub. 2005/0007656).

With regard to claim 1, Chung discloses in Fig. 2 an optical fiber amplifier comprising

- A first gain block (100) with a gain medium (40) and an optical pump (30)
- A second gain block (300) with a gain medium (41) and an optical pump (34)
- An optical fiber (50) disposed between the first and the second gain blocks
- A Raman pump (31) and (32) generating a pumping light
- A coupling means coupling the pumping light (11) to the optical fiber

Art Unit: 3663

The first gain block has a gain profile which is substantially opposite that of the optical fiber (when the optical amplifier is operated as described in paragraph [0042]), resulting in a flat spectral gain profile, as illustrated in Fig. 6.

Note that the clause "to thereby offset gain characteristics [from] each other and obtain a flat spectral gain profile" is interpreted as essentially a statements of intended or desired use. Thus, this claim does not serve to patentably distinguish the claimed structure over that of the reference. See In re Pearson, 181 USPQ 641; In re Yanush, 177 USPQ 705; In re Finsterwalder, 168 USPQ 530; In re Casey, 512 USPQ 235; In re Otto, 136 USPQ 458; Ex parte Masham, 2 USPQ 2nd 1647.

See MPEP § 2114 which states:

A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from the prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. Ex parte Masham, 2 USPQ 2nd 1647

Claims directed to apparatus must be distinguished from the prior art in terms of structure rather than functions. In re Danly, 120 USPQ 528, 531.

Apparatus claims cover what a device is not what a device does. Hewlett-Packard Co. v. Bausch & Lomb Inc., 15 USPQ2d 1525, 1528.

With regard to claim 2, the optical fiber is a dispersion compensating fiber.

With regard to claim 3, the amplifier further includes a gain equalizing filter (21).

With regard to claims 4 and 5, the gain media in the first and second gain blocks are rare-earth (erbium) doped optical fibers.

Note that the citations made herein are done so for the convenience of the applicant; they are in no way intended to be limiting. The prior art should be considered in its entirety.
